

Valve Cotters (汽門鎖片)

TSU YUN SEN CORPORATION
竹 永 盛 有 限 公 司

汽門鎖片之材質採用鋼鐵。使用冷鍛或是 CNC 車床，控制公差;熱處理與表面加工。精密內徑的鑽孔控制保護汽門軸的碰觸。接近圓錐的角度處控制保護彈簧座的碰觸。這結果是一個優良的汽門軸在聚合時可保護彈簧座。在聚合的時無相對應的動作，這結果是讓其有較小的磨擦及延長使用壽命。

The material of "Valve Cotter" is Steel. "Valve Cotters" are made using cold forging technology or CNC lathe seamless technology to control tolerance, heat treatment and surface finish.

Precision ID bore to control and secure valve stem's contact.

Close taper angle to control retainer's contact. The result is an excellent valve stem to secure retainer in the assembly. There is no relative motion in the assembly; this result is to reduce wear and extend life of cotters.
